

# Physiological Costs of Reproduction in the Bean Beetle

Emily Boone

Biology Department, University of Richmond, 28 Westhampton Way, Richmond VA 23173 USA  
([eboone@richmond.edu](mailto:eboone@richmond.edu))

So you have been to the ABLE bean beetle workshops, carefully smuggled your beetles through airport security, performed the experiments...now what? You design your own bean beetle lab of course. This simple experiment was designed for an introductory physiology class to examine the costs of reproduction in bean beetles. Students design and conduct experiments to evaluate the overall fitness costs that beetles experience as a result of mating and egg laying.

## Mission, Review Process & Disclaimer

The Association for Biology Laboratory Education (ABLE) was founded in 1979 to promote information exchange among university and college educators actively concerned with teaching biology in a laboratory setting. The focus of ABLE is to improve the undergraduate biology laboratory experience by promoting the development and dissemination of interesting, innovative, and reliable laboratory exercises. For more information about ABLE, please visit <http://www.ableweb.org/>.

Papers published in *Tested Studies for Laboratory Teaching: Peer-Reviewed Proceedings of the Conference of the Association for Biology Laboratory Education* are evaluated and selected by a committee prior to presentation at the conference, peer-reviewed by participants at the conference, and edited by members of the ABLE Editorial Board.
